15 Nov 12	Sydney	Sterilising Services

STERILISING SERVICES (SS) 1 DAY WORKSHOP (8 CPD Points)

HICMR Infection Control Consultants are pleased to present a 1 day Infection Prevention & Control Workshop for all Healthcare Workers (HCWs) involved in the care and processing of medical devices in Sterilising Services and other related areas, such as the Operating Theatre. The SS Infection Prevention & Control Risk Management Workshops are scheduled regularly in most states for both HICMR and non HICMR clients. The aim of these Workshops is to educate HCWs in relevant areas on **current and new Infection Control standards and practices**, to assist them in evaluating and managing their Infection Prevention & Control risks with a view to improving outcomes and minimising adverse events. Nb. From a risk management perspective it is recommended that all staff processing the relevant equipment attend the HICMR Workshop (or similar Infection Prevention & Control Workshop) within 6-12 mths of commencement in the area, & every 2 yrs thereafter.
